

## Client Setup

### Guide

This article is part of the [Installation Guide](#). You can read it alone or click on the previous link to easily move between the steps.  
<<Step 6: Final Server Steps

#### 3.3.5a only:

- Open the **realmlist.wtf** file inside your **World of Warcraft\Data** folder. The IP in the realmlist.wtf file should be exactly the same as the IP address you entered in the realmlist table above.
  - Change the first line to: **set realmlist <IP address used in realmlist table>**
  - Example: **set realmlist 127.0.0.1**
- (Optional) If you wish to use the WoW Launcher.exe to run your client then you must change your **set patchlist** to the same ip/dns name as your realmlist.

#### master only:

- Change **Config.wtf**: SET portal "<IP address used in realmlist table>"
- The IP in the Config.wtf file should be exactly the same as the IP address you entered in the realmlist table above. (Example: **SET portal "127.0.0.1"**)

#### Supported Version

Check <https://github.com/TrinityCore/TrinityCore> to find the exact client version supported by master branch.

NOTE don't use localhost for address, if you need to connect to localhost use 127.0.0.1
